Riverbend Product FAQ

FICTIONAL TEST DOCUMENT. Riverbend Notes is an invented document research product. All names, prices, and policies below are synthetic examples for testing retrieval and source citations. No service is being sold by this sample document.

1. Product overview. Riverbend Notes helps a small team ask questions about selected documents. A team member uploads readable PDF or text documents, chooses the sources for a conversation, and asks a question in ordinary language. Replies can include numbered citations. Opening a citation reveals the original document passage used for that answer.

The demonstration emphasizes traceability. A useful answer should explain the relevant fact and show which passage supports it. A citation is a pointer to evidence, not a guarantee that the model has interpreted the evidence correctly. Reviewers should read the expanded passage when checking an important claim or resolving an apparent contradiction.

2. Sample plans. The Starter plan costs R120 per month and includes 20 documents. The Team plan costs R350 per month and includes 100 documents. These amounts are fictional South African rand prices and are quoted per month. The sample plans do not describe annual billing, discounts, taxes, or an enterprise contract.

A team should choose a plan according to the number of documents it needs to keep available, not the length of a single assistant response. If someone asks for a feature or price that is not listed here, the correct research response is to explain that this FAQ does not supply that fact. It should not extrapolate a larger plan from the two examples.

3. Refund policy. A first-time customer may request a refund within 14 calendar days of the first payment. The request is submitted to the product support desk with the payment reference. The support desk acknowledges the request within three working days. An acknowledgement is separate from the final review outcome.

The fictional refund rule is limited to a first payment. This FAQ does not state a refund entitlement for later renewals or explain how a bank handles a reversed transaction. A reviewer testing source grounding should ask a follow-up about one of these missing details and check that the assistant does not invent an additional condition or promise.

4. Document support. Accepted file extensions are .pdf and .txt. A PDF must contain readable text; a scanned image without a text layer needs OCR before upload. The upload limit is 4 MiB per file. An uploaded file may contain no more than 200 PDF pages, and extracted text may contain no more than 500,000 characters or 250 chunks in this demonstration.

Riverbend Product FAQ

Text is split into approximately 500-token chunks with 50-token overlap. The overlap gives nearby chunks some shared context when a useful sentence falls close to a boundary. Embeddings use 1536 dimensions. These processing details describe this demonstration and should not be generalized to every retrieval system or every embedding model.

5. Conversations and history. Select between one and ten documents before asking the first question. That selection stays fixed for the conversation. To use a different collection, start a new conversation. The conversation list shows a short generated title and a timestamp. A generated title contains at most six words and can fall back to words from the first question if the title service is unavailable.

Reopening a saved conversation loads its messages and cited source text. Each reply has its own source numbering, so source 1 in one reply is not necessarily source 1 in a later reply. Saving source text with the message lets a reviewer inspect the evidence that was present when that response was written.

6. Limits of this source. This FAQ does not list office opening hours, meeting room sizes, or the equipment loan form. Those facts appear in the Riverbend Operations Handbook. Use both documents for a comparison question and only the FAQ when checking that handbook-only information is not introduced into the answer.

Testing questions: Compare the two plan prices and document allowances. How long is the refund window? Does the FAQ promise annual billing? Expected facts: Starter R120 and 20 documents; Team R350 and 100 documents; refund request within 14 calendar days; annual billing is not specified.
